In this era of digital transformation, an agile mindset is required to quickly assess complex situations, solve problems, and make good decisions.

The KT Problem Solving (eLearning & Expert Coaching) program provides a foundational understanding of Kepner-Tregoe's Situation Appraisal and Problem Analysis methodologies.

The workshop consists of 2 parts: The dynamic, application-based, eLearning part combines the introduction to the KT methods with practical examples. This helps learners discover how to successfully apply critical thinking and rational process to real world issues.

During and after completing the eLearning, participants join virtual coaching sessions with a KT expert to review their knowledge, do further applications and interact with other learners.

Learners study at their own pace and according to their personal schedules. This means more convenience and less disruption. At the same time the instructor-led coaching helps to embed the concept and deepen the understanding, and motivates for continued use.

The award-winning eLearning section has been designed with a dynamic mix of media to maximize engagement and learning retention. Participants of the full workshop receive a KT Foundation Badge.

Key Features

- State-of-the-art eLearning combined with expert coaching
- Remotely accessible
- Automated and scalable to any size organization (for inhouse training)
- Excellent as an introduction, or as a refresher

The Power of KT

- Improve the speed, quality, and consistency of priority setting and planning, while improving root-cause-analysis skills
- Master a common language for solving problems
- Empower employees and achieve a higher level of engagement
